PROFESSIONAL SUMMARY

Software Engineer with AI specialist experience, focused on data analysis and model development. Delivered a lead scoring system that increased sales team efficiency and raised conversion rates by 15%. Built CRM dashboards, LLM pipelines, and web scrapers using Python, SQL, and modern web technologies. Seeking to turn messy data into clear insights that drive business decisions.

TECHNICAL SKILLS

- **Programming:** Python, SQL, JavaScript, TypeScript, CSS, C++
- **Data Analysis:** Pandas, NumPy, Matplotlib, Seaborn, Plotly, Power BI, Streamlit, Tableau
- **Machine Learning:** Scikit-learn, PyTorch, TensorFlow, LangChain, LangGraph, OpenCV
- **LLM & AI Agents:** Prompt Engineering, RAG Pipelines, API Integration, Model Benchmarking
- **Cloud & DevOps:** Azure, AWS, Docker, Git, CI/CD pipelines (Vercel/GitHub Actions), Kubernetes
- **Other:** Web scraping (BeautifulSoup, Selenium), Process Automation, Technical Writing

EDUCATION

Symbiosis Institute of Technology

Pune, Maharashtra

B.Tech (Robotics & Automation)

Jun 2021 - Jun 2025

Relevant Coursework: Machine Learning, Statistics, Database Management, Data Visualization, Deep Learning, Computer Vision, Reinforcement Learning, IoT, Cloud Computing.

EXPERIENCE

Software Engineer | Artenos Network Pvt Ltd

July 2025 - May 2026

- Built and maintained dashboards from CRM data using Python and Matplotlib, version-controlled with Git; the dashboards enabled the team to cut decision time by 25%
- Ran LLM benchmarks and test prompts. Raised model response accuracy by 15%
- Wrote full-stack applications with React Native, Next.js, TypeScript, and Python REST APIs hosted on Vercel, delivering functional tools for internal users

AI Specialist | Sygnius Digital, Noida

January 2025 - June 2025

- Wrote a scraper for Google Maps leads that fed into AI calling systems. Cut manual lead generation work by 40%
- Added an AI voice agent to the CRM that handled follow-up calls. Saved the sales team 40% of their call time
- Analyzed sales data with Python and SQL. Found that calls within one hour of lead capture converted 3x better. Changed the workflow and raised overall lead conversion by 15%

PROJECTS

Quantamental-Screener | Python, Yahoo Finance API, NewsAPI, scikit-learn, Streamlit

- Built a stock screener that combines momentum, volume, and volatility with news sentiment from FinBERT.
- Created a ranking score from four factors. Made an interactive dashboard to see results.
- Demo: quantamental-screener.streamlit.app

Ant Colony Task Scheduler | JavaScript, HTML5 Canvas

- Built a visualizer where ants find the best order for daily tasks using Ant Colony Optimization.
- Users can adjust ant count, iterations, and pheromone settings. The algorithm solves a Traveling Salesman Problem in real time.
- Demo: akshayaa-403.github.io/anttodo

Wikipedia Summarizer | Python, NLTK, Transformers, ROUGE

- Wrote a tool that condenses long Wikipedia articles into short summaries.
- Used ROUGE to check summary quality. Solved the problem of keeping context across long text.
- Demo: akshayaa-403.github.io/Wikipedia-Summarizer
